The reader retains answers that the learned pixel writer loses

a Complete pixel-exact training answers / 64

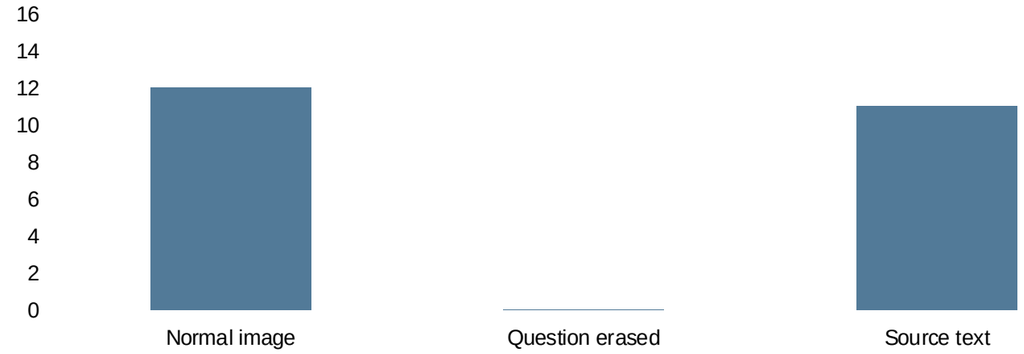

Final full training: 495/512 exact.
Normal development: 0/16 Chinese, 0/8 English.
All 512 training first images exact; all 24 normal development first images inexact.

b Correct first image loses likelihood

Final Chinese mean: -751.24 nats. Every reference loses.
Relative preferences still transfer: 14/16 favor the owning question; all 8 paired assignments positive.

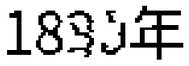

c Native reader: literal text matches / 16

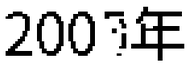

Same 32 image-memory fingerprints as the ILM.
A symbolic diagnostic baseline, not an image-output solution.

d Actual pixel outputs remain damaged

Question 13 | helper year 1874

Question 16 | helper year 2001

Unrepaired final outputs. No missing stroke is inferred toward gold.
Literal text, image exactness and relative preference are different measurements.
