# Glyph copying, source-step mismatch and complete-answer failure

## a Held-wording copies reaching F1 0.95

Same G and copy data. Gate requires at least 205/256.
Mean F1: 0.951778 vs 0.972856. This is not language accuracy.

## b Same-prefill source-policy diagnostic

Source head attached: diagnostic only, not ILM answers.
Equal counts do not mean equal trajectories; failures retained.

Native unit: one or more characters → Glyph feedback: one character per step → Changed sequence advancement

## c Fresh C3 outputs: neither model gives a correct complete phrase (0/32 each)
